FINANCIAL ANALYST | FP&A, FINANCIAL MODELING & COMMERCIAL ANALYSIS

Summary

Financial Analyst with 4+ years of experience in forecasting, budgeting, and commercial analysis across metals processing and home furnishings. At National Material L.P., I manage the P&L and cash forecast for a group of customer processing programs and maintain multi-year contract profitability models that shift with volume, pricing, cost, and timing. Advanced Excel user comfortable in SOX-controlled environments and in rooms with non-finance partners. Currently building hands-on knowledge of TV series economics through independent modeling projects and looking to bring this foundation to scripted television finance.

Technical Skills

Excel & Modeling: XLOOKUP, INDEX/MATCH, SUMIFS, PivotTables, Power Query, Power Pivot, data tables, Goal Seek, basic VBA macros; driver-based forecasts, NPV/IRR, break-even and contribution margin analysis

ERP & Business Systems: Microsoft Dynamics 365 F&O, Oracle NetSuite, PeopleSoft, Salesforce, Airtable, Sonia Placement System

Data & Reporting: SQL, Python (pandas, NumPy, matplotlib, Jupyter), Power BI, Tableau, Microsoft Access

Workflow & Collaboration: Power Automate, SharePoint, Smartsheet, Google Sheets, Teams, Microsoft Copilot

Accounting Knowledge: US GAAP, month-end close support, accruals, standard costing, GST and TDS reconciliation (India), IFRS (coursework and independent projects)

Core competencies

FP&A • Budgeting & Rolling Forecasts • P&L and Cash Flow Planning • Long-Range Planning • Financial Modeling • Scenario & Sensitivity Analysis • Pricing & Contract Analysis • Variance & Root-Cause Analysis • Executive Reporting • SOX Controls • Working Capital & Inventory Analysis • Cross-Functional Partnership

Work Experience

National Material L.P.

Remote, US

Financial Analyst, FP&A

05/2025 – Present

- Manage the monthly P&L, 13-week cash forecast, and quarterly reforecast for 5 toll-processing and supply programs (~\$9.2M annual revenue); prepare the program-level inputs for the annual budget and 3-year plan reviewed by the FP&A Director.
- Maintain multi-year contract profitability models covering processing revenue, conversion cost, freight, scrap credits, and receivables timing; reforecast each quarter as coil volumes, steel surcharges, and ship dates move.
- Built pricing scenarios for the Sales team ahead of a 3-year customer renewal; showed the proposed flat rate would lose ~\$185K in margin over the term once yield loss and freight escalation were included, which led to a surcharge pass-through clause in the final agreement.
- Flagged a ~\$310K Q4 revenue slide tied to a customer's delayed line start about 5 weeks early, separating timing movement from true volume loss so leadership could adjust cash expectations rather than cut the full-year number.
- Run monthly actual vs. forecast reviews with Plant Operations and Procurement, tracing gaps to slitting yield, overtime, and coil price swings; program-level forecast accuracy moved from ~90% to ~95% over three quarters.
- Build the monthly program review deck for the Controller and plant managers, keeping it to what moved, why, and what to watch next month.
- Perform a quarterly SOX control over forecast model inputs, tying model actuals to the D365 F&O general ledger and keeping an assumption change log for reviewer sign-off.
- Replaced a copy-paste budget workbook with a Power Query model fed by D365 F&O exports, cutting monthly refresh from ~2 days to about half a day.

PVR Home Crafts

Hyderabad, IN

Financial Analyst

01/2022 – 12/2023

- Supported the annual budget and monthly rolling forecast for a ~₹42 Cr home furnishings business in Oracle NetSuite, covering revenue, COGS, and marketing for furniture and decor lines.
- Built launch profitability models for seasonal collections, weighing upfront design, sampling, and inventory spend against 12 to 18 months of expected sell-through; used in go/no-go reviews for 9 new collections.
- Modeled a ₹1.6 Cr hotel furnishing contract across pricing, customization cost, and delivery schedule; recommended milestone billing that improved projected contract cash inflow by ~₹22 lakh.
- Tracked teak, sheesham, and fabric cost inflation during 2022 freight disruptions and built pricing scenarios that supported a selective 6% price increase, protecting ~180 bps of gross margin.
- Found marketplace returns to be the main driver of channel margin slippage through SKU-level variance analysis and worked with Operations on a revised returns policy.
- Handled monthly GST input credit reconciliation and inventory tie-outs to the ledger, and prepared audit schedules for the statutory auditors.

- Forecast seasonal request volume for transcripts, enrollment verification, and graduation audits using 4 years of PeopleSoft history, helping plan temp staffing for peak months.
- Reconciled student records across PeopleSoft, Salesforce, and Sonia Placement System for internship and clinical placements, clearing ~900 mismatches and setting up a recurring exception report.
- Set up Airtable workflows and Tableau views to track backlog and turnaround, bringing average processing time during commencement season from 6 days to about 4.

Education

Arizona State University, Tempe, AZ	December 2025
<i>Master's degree in management information systems; GPA 3.74/4.0</i>	
Relevant coursework: Financial Statement Analysis, Corporate Finance, Predictive Analytics, Managerial Accounting	
B V Raju Institute of Technology, Hyderabad	
<i>Bachelor's degree in Computer science; GPA – 8.74/10.00</i>	

Additional Details

- Volunteer: VITA tax preparer, 2024 filing season (30+ returns for low-income households)
- Interests: Pickleball, cooking regional Indian food, following studio and streaming earnings calls

Projects

SlateCast TV Delivery & Cash Forecasting	Excel, Python, SQL
• Built a six-quarter financial model for six fictional TV series, integrating delivery schedules, production budgets, revenue forecasts, and cash-flow projections. • Reconciled a simulated \$17.25M contribution shortfall into delivery-timing and cost drivers, identifying a \$123.58M peak funding requirement to support liquidity planning.	
SeriesWorth TV Lifetime Profitability Analysis	Excel, Python
• Developed a television Ultimate model linking lifetime revenue estimates to prospective amortization, current-period profitability, and content-asset recovery across four scenarios. • Stress-tested future revenue assumptions, identifying a \$38.52M recovery break-even threshold and quantifying downside exposure through sensitivity analysis and asset roll-forward controls.	
RightsScope Licensing Deal Valuation	Excel, Python
• Evaluated three fictional licensing offers using incremental NPV, payment schedules, participation costs, and revenue displaced by exclusivity. • Identified a \$31M offer generating \$12.93M in modeled incremental NPV, outperforming a \$42M offer; calculated negotiation thresholds and tested 27 offer and scenario combinations.
